

Adds two adaptors for displaying your content. Adaptors are provided for Paragraphs and Single Directory Components that allow you to display them interchangeably.

Features

The SDC Paragraph type lets you attach a Single Directory Component (SDC) to a Paragraph.

The Paragraph Single Directory Component (SDC) lets you attach and display a Paragraph in the SDC.

Post-Installation

Find the paragraph ID or Single Directory Component (SDC) name and location (theme or module name).

Use those to specify which Paragraph or SDC to display.

Paragraph SDC

A Drupal module that provides SDC (Single Directory Components) integration with the Paragraphs module, allowing dynamic entity rendering and component inclusion.

Quick Start

```
<span class="hljs-meta"># Install dependencies</span>
drush en paragraphs twig_tweak
```

```
<span class="hljs-meta"># Enable module </span>
drush en paragraph_sdc
```

```
<span class="hljs-meta"># Clear cache</span>
drush cr
```

Usage

Standalone Components

```
{% include 'paragraph_sdc:paragraph-sdc' with { id: 12345 } %}
```

```
{% include 'paragraph_sdc:entity-sdc' with { entity_type: 'node', id: 67890 } %}
```

Dynamic SDC Paragraphs

1. Add SDC Paragraph to content
2. Set component name: theme_name:component_name
3. Add JSON properties

Features

- Two reusable SDC components for entity rendering
- Dynamic paragraph type for any SDC component
- JSON property support
- User-friendly and developer-friendly variants
- Enhanced paragraph summaries

Requirements

- Drupal 10.x or 11.x
- Paragraphs module
- Twig Tweak module
